                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a vaccine (I) comprising at least one polynucleotide (ABC78008-ABC78039) having a Chlamydia sequence or at least one Chlamydia antigen (ABB98203-ABB98234) and a pharmaceutically acceptable carrier. The antigens are useful for immunising an animal, by providing at least one Chlamydia antigen or its antigenic fragment to the animal, in an amount effective to induce an immune response in the animal e.g. mammals including bovine or human. The method is effective to induce an immune response against C. psittaci. C. pneumoniae or non-Chlamydia infection. The method further involves administering to the animal antigen or an antigenic fragment from Chlamydia species other than C. psittaci or C. pneumoniae or an antigenic fragment from fragment from a con-Chlamydia species other than
                                                                                                                                                                                                                                                                                                                                Vaccine; chlamydia abortion; sexually community-acquired
                                                                                                                                                                                      16-AUG-2000;

Claim 21; Page 55; 100pp; English

a nucleic acid encoding an antigenic polypeptide from a second disease state or infectious agent for the first disease state/infectious agent, and testing the homology to see if it is an antigenic polypeptide or a nucleic acid encoding an antigenic polypeptide for the first disease state or infectious agent). The vaccine, antigens and polynucleotides are useful for inducing a protective immune response in vertebrate animals against C. psitacci, C. pneumoniae, other species of chlamydia, or a non-chlamydia infection. The antigens are also useful fo antibody preparation techniques. Chlamydia species are responsible for blindness, sexually transmitted disease, community-acquired pneumonia and act as co-factors in atherosclerotic plaque formation in coronary heart disease. C. psittaci in particular is a cause of mastitis infertility and abortion in cartile The present seminors is one of the the best immune response, and then expressing those clones in cell culture and purifying the protein), preparing antibodies against a Chlamydia antigen (comprising identifying a Chlamydia antigen that confers immune resistance against chlamydia bacterial infection when challenged with the Chlamydia species in which the antigen was prepared, generating an immune response in a vertebrate animal with the identified antigen, and obtaining antibodies produced in the animal, the antibodies are used to assay for the presence of chlamydia infection in a vertebrate animal) and testing for antigens for a first disease state/infectious agent (comprising determining an antigenic polypeptide or a nucleic acid encoding an antigenic polypeptide from a second disease state or infectious agent, obtaining a homologue of the antigenic polypeptide or the vector pcMV-Ubi(+P3). Also included are immunising an animal comprising providing to the animal at least one Chlamydia antigen or its antigenic fragment (expressed from the cloned polynucleotides) to induce an immune response (the proteins are chosen by transforming a vertebrate animal with constituents of the library and choosing those which elicit and at least one polynucleotide having a Chlamydia sequence or at least one Chlamydia antigen. The polynucleotide sequences are obtained from cloned expression library of fragmented genomic DNA (expressed in infertility and abortion in Chlamydia psittaci antigens invention relates to a vaccine comprising a pharmaceutical carrier ortion in cattle. antigens encoded The present sequence is one of the by a genomic DNA fragment of the

The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.
Note: The sequence data for this patent is based on equivalent patent w0200177334 (published 18-ocr-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                           New enzyme preparation comprising a xyloglucanase with an activity of 50 % at properties of cellulosic fibres, yarn, (non)woven fabric, and ratting hemp, jute, flax and linen fibres
                                                                                                                                                                                                                                                                                                                                                                          24-OCT-1997;

This polypeptide comprise alkaline xyloglucanase XEG1 of Bacillus agaradhaerens NCIMB 40482. The enzyme shows optimal cactivity at 50 deg C, and retains 20% of its activity at 50 deg C, and retains 20% of its activity in the pH craft for a control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the contro
Cellulase with low ratio of tensile strength loss to antipilling properties - used in detergent composition which provides anti-greying, softening, anti-wrinkling and colour protection to fabrics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cellulase; BCE 113; detergent; surfactant; laundry; tensile strength; antipilling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAW00383 standard; Protein; 574 AA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bacillus sp. strain CBS 669'93 has a tensile strength loss to antipilling ratio below 1. It can be isolated from CBS 669.93 fermentation broth or expressed at high levels in transformed host cells utilising an isolated gene sequence (AAT41849). Cellulase BC 113, and similarly isolated cellulase BCE 103 (see also AAW0382), show good activity at alkaline pH, and can be used in laundry detergent compsns. to provide anti-greying, softening, anti-wrinkling and colour protection to fabrics.
              polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating discrete in the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the content of the conten
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 10;
                                                                                                                                                                                                                                                                                                     Claim 20;
                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences, ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations
                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-MAR-2000;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

Sequence 9, Applic Patent No. 628830; GENERAL INFORMAT

Application US/09072917A

ALIGNMENTS

INFORMATION:

APPLICANT: Yu, Su-May
APPLICANT: Liu, Li-Fei
APPLICANT: Chan, Ming-Tsair

```
TITLE OF INVENTION: Application of Alpha-Amylase Gene
TITLE OF INVENTION: Promoter and Signal Sequence in the Production of
Patent No. 6288302
TITLE OF INVENTION: Recombinant Proteins in Transgenic Plants and Transgenic
TITLE OF INVENTION: Plant Seeds
                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                               0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

                                                                  Sequence 8, Application US/09510322A

Patent No. 6391557

GENERAL INFORMATION:

APPLICANT: Fox Chase Cancer Center

TITLE OF INVENTION: Nucleic Acid Encoding a Mismatch

TITLE OF INVENTION: Endonuclease and Methods of Use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQ ID NO 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Patent No. 6448046
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local Similarity Matches 7; Conserv
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                     Matches

COMPUTER EADABLE FOOM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOUTWARR: PATENTIN Release #1.0, Version #1.30

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/818,112

FILING DATE: 13-MAR-1997

CLASSIFICATION UNBER: 31,392

REGISTRATION NUMBER: 31,392

REGISTRATION NUMBER: 31,392

REFERENCE/DOCKET NUMBER: 210121.411C6

TELEPHONE: (206) 682-6031

INFORMATION FOR SEQ ID NO: 79:

SEQUENCE CHARACTERISTICS:

LENCTH: 355 amino acids

STRANDEDNESS: single

alpha-amylase (EC 3.2.1.1) B precursor (gene Amy56 and others) - barley N;Alternate names: 1,4-alpha-D-glucan glucanohydrolase C;Species: Hordeum vulgare (barley) C;Date: 17-Apr-1993 #sequence_revision 21-Jan-1997 #text_change 18-Jun-1999 C;Accession: JE0406; B30759; S06275; B31960; B21826 R;Rahmatullah, R.J.; Huang, J.K.; Clark, K.L.; Reeck, G.R.; Chandra, G.R.; Muthukrishnan Plant Mol. Biol. 12, 119-121, 1989 A;Title: Nucleotide and predicted amino acid sequences of two different genes for high-FA;Reference number: JE0405 A;Accession: JE0406
A;Pathway: glycogen/starch degradation
C;Superfamily: wheat alpha-amylase; alpha-amylase core homology
C;Keywords: aleurone cell; germination; glycosidase; hydrolase;
F;172-318/Domain: alpha-amylase core homology <AMY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A; Molecule type: mRNA

A:Molecule type: protein
A;Residues: 25-29 <UGS>
C;Comment: Production of this enzyme in barley is hormonally regulated. Germinat:
C;Function:
C;Function: Catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Description: Wheat alpha-amylase; alpha-amylase core homology
A; Molecule type: protein
A; Residues: 25-59,'X',61-67,'HX',70-85,
C; Comment: The mRNA of this isozyme (B)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
